

SUPA MARE

Premium Supplementary Broodmare Feed

Supa Mare is a balanced formulation that accurately meets the important energy and protein levels that your mare needs for optimum condition. It is another one of our high quality mixes with all the essential sources of energy, nutrients, vitamins and minerals incorporated to ensure your mare receives the finest nutrition. With the incorporation of the full range of vitamins and minerals, other dietary supplementation can be reduced.

Feeding Recommendations:

As a guideline, feed 2-4kg of Supa Mare per day to a mature mare around 500kg starting with 1-2kg in early pregnancy, rising to 3kg in late pregnancy and 4kg at peak lactation. If the mare's body condition is poor at the start pregnancy, this should be raised to 2-3kg per day until condition is regained. If the mare is over-fat, reduce the meal intake to 0.5-1kg per day during early pregnancy. When offering higher amounts, split daily meal into morning and evening feeds to avoid acidosis and improve the efficiency of meal utilization. Mixing the meal with chaff will reduce the rate of meal intake to help minimize digestive upsets.
